

eDoc Enabled Transcription Services – For Hospitals

A team of highly skilled medical transcription professionals, dedicated client care, best-of-breed process management practices, and an in depth understanding of the healthcare environment enables Accentus to offer healthcare providers industry leading Transcription Solutions.

Accentus Transcription Solutions are supported by the eDoc Document Management platform. eDoc features a state-of-the-art speech engine, which combines conversational speech recognition and natural language processing, taking speech understanding beyond basic speech-to-text translation. eDoc's powerful speech engine transforms narrative into meaningful, context-aware clinical documents allowing for faster and more accurate processing of dictations.

From short-term backlog and overflow support to a completely outsourced solution, partnering with Accentus gives clients economical, flexible, and customizable transcription options.

BENEFITS OF EDOC ENABLED TRANSCRIPTION SERVICES

PEOPLE WITH HANDS-ON EXPERTISE

Accentus transcriptionists and editors have specialities in all medical fields and are dedicated to delivering the highest quality medical documentation in the industry today.

Accentus teams are always available to provide and scale to the level of support your organization needs – quickly adapting to new medical environments to provide the best transcription support available.

TECHNOLOGY THAT DELIVERS

COST EFFECTIVE

eDoc eliminates large up-front and on-going investments in hardware, software, licensing, and data centre maintenance fees allowing clients to take full advantage of evergreen technology with maximum deployment flexibility.

ACCESSIBLE

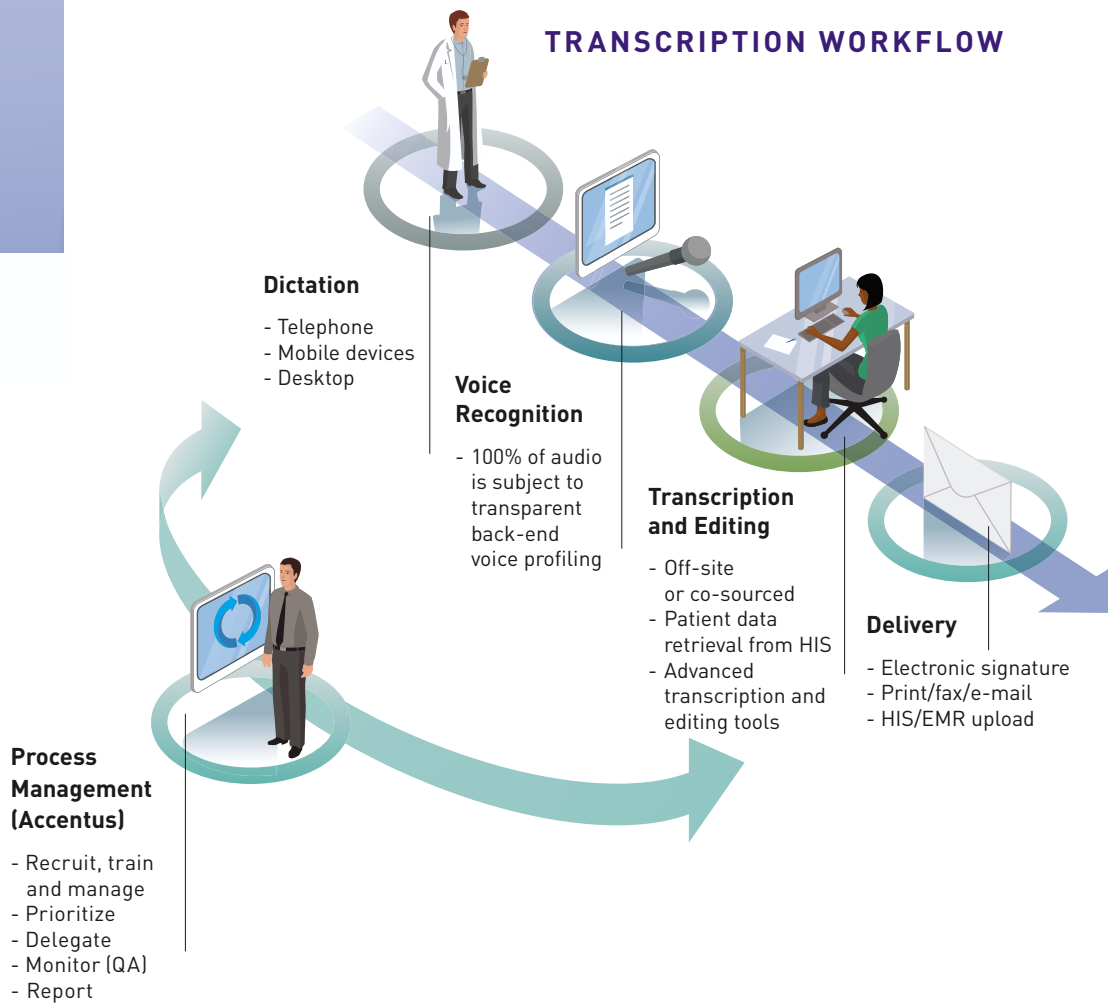

Hospitals of all sizes can benefit from the latest speech recognition technology without impacting capital and operating budgets. For smaller hospitals this means access to state-of-the-art technology that would normally be price prohibitive.

FULLY SCALABLE AND ALWAYS AVAILABLE

eDoc accommodates fluctuations in capacity requirements, scaling up or down based on real time needs and clients only pay for actual usage.

TRANSCRIPTION WORKFLOW

KEY FEATURES OF THE eDOC DOCUMENT MANAGEMENT SYSTEM

- A powerful speech recognition engine that allows dictators to maintain their dictation habits and speaking styles and promotes optimal speech understanding efficiency regardless of accent, dialect, fat speech, and false starts.
- The ability to seamlessly and effortlessly create speech profiles with less than 10 minutes of dictated audio. With the hosted approach, dictators can be profiled in the background as part of the normal transcription process.
- The unique ability to share one single speech profile across all speech enabled solutions (front-end and back-end, and mobile devices).
- A powerful, cloud-based speech understanding engine that understands the dictator's intent in the context of the entire dictation and continuously learns and improves the translation of the meaning.
- The ability to translate physician dictation in real-time into a searchable, structured XML Clinical Document Architecture (CDA) standard document, preserving the physician's narrative reasoning for a course of care while simultaneously structuring and encoding clinical facts – such as diagnosis, procedures, medications, and allergies as stated in the physician's dictations for many subsequent uses and easy upload into EHR/EMR environments. This functionality promotes meaningful use and enhanced data mining for analysis and clinical research.
- A sophisticated reporting suite consisting of a full range of predefined and custom reports that can be generated on-demand for management reporting, analysis, planning and forecasting.
- Seamlessly integration with existing hospital systems.

ACCENTUS OFFERS

A COMPLETE PORTFOLIO OF INTEGRATED MEDICAL DOCUMENT MANAGEMENT SOLUTIONS ENABLING HEALTHCARE PROFESSIONALS TO CAPTURE, ACCESS, MANAGE, AND SHARE PATIENT INFORMATION.
